CLASSIFICATION: UNCLASSIFIED

Eric,

We received a tip that Twin Pines had started work on the project site. The WWALS has aerial imagery posted on their site of mining equipment staged.

<http://www.wwals.net/2019/10/06/heavy-equipment-on-tpm-titanium-mining-site-near-okfenokee-swamp-2019-10-05/#more-50341>

The area in the photos is part of the Keystone Tract, which had the delineation verified last year. The consultant states they are working entirely in uplands and will provide us with a map showing the delineation and this new constructed work area to demonstrate the work is all in uplands. I spoke with Cindy shortly after I sent the email and she has staff on the site now who were out there performing plant surveys who will be surveying the work area today and expecting to get us the requested map by the end of the week or early next week.

I can give you a call when you are available - I'm in the office until 4-ish today.

Holly
