

INNOVATION WITH ENVIRONMENTAL RESPONSIBILITY

Designed for Innovation, Built with Community in Mind.

NO FUMES

Irwin County's data center will operate without combustion processes and therefore will not emit toxic fumes, relying instead on clean electrical power and advanced cooling technologies.

CLOSED LOOP WATER

Irwin Forward will use a closed-loop cooling system that continuously recirculates coolant within a sealed process, minimizing water consumption, preventing environmental discharge, and maximizing energy efficiency.

LIMITED NOISE

Irwin Forward Tech Park's data center is engineered to produce minimal noise, with innovative building design and a surrounding natural tree buffer working together to significantly reduce sound impacts on the surrounding area.

NO DISCHARGE

Irwin's County data center is designed with fully contained systems that produce no environmental discharge, ensuring operations do not release water, chemicals, or emissions into the surrounding environment.
