PETITION TO ELECTED OFFICIALS
AGAINST THE SABAL TRAIL TRANSMISSION METHANE GAS PIPELINE

Petition Summary and Background: Sabal Trail Transmission LLC, a joint venture of Spectra Energy, NextEra Energy, and Duke Energy, proposes a 36 inch diameter methane gas pipeline to run from southwest Alabama, through south Georgia, and through 12 counties in Florida. We oppose this pipeline for the following reasons (for more detail see http://www.wwals.net/issues/stt/):

- It provides no benefit to the citizens in the counties that it would traverse, but those citizens would bear the burden of the negative impacts.
- It is a threat to our Floridan Aquifer, potentially polluting our primary water resource in the state.
- It is a threat to our health, safety, and air quality from gas leaks, explosions and hazardous compressor station emissions.
- It is a threat to our natural environment, drilling through wetlands and under rivers.
- It would transport methane gas that has been obtained by the dirty process of fracking which introduces toxic contaminants into water and air.
- We need to move now to Solar and Wind Energy as clean, renewable energy resources.

Action petitioned for: We, the undersigned, are concerned citizens of Florida who oppose the Sabal Trail Transmission methane gas pipeline for the above reasons. Rather than continuing to risk our water supply by building new pipelines to transport more fossil fuel into our state, fostering more consumption, we support conservation and investing in clean energy like solar to meet future energy demands. We, the voters of our state, demand that our elected officials act now to oppose the permitting and construction of Sabal Trail Transmission pipeline!
